Art Unit: 2814

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-37, drawn to a semiconductor device, classified in class 257, subclass 762.
- II. Claims 38-56, drawn to a method of making a semiconductor device, classified in class 438, subclass 687.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as one in which rather than forming the groove in an insulating layer and subsequently forming the wiring therein, the wiring layers are formed and patterned first followed by forming the insulating layer including the groove. Conversely, the product as claimed can be used to make a different product such as gate material for MESFET devices rather than for interconnection.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
